

Structural Engineering

With the largest structural engineering team in Southwest Florida, TKW offers a comprehensive solution for building design and management.

The structural engineering team at TKW delivers innovative and economical solutions to architects, owners, and builders. Our structural engineering practice focuses on the design of hurricane-resistant municipal, institutional, residential and commercial structures, including inspections during construction and the investigation and evaluation of distressed buildings.

TKW provides structural design for new buildings, additions, and renovations. In addition to design, we offer threshold inspection, peer review, value engineering, expert witness, condition assessments, and feasibility studies. Our experienced engineers and designers utilize Revit and BIM 3D modeling. TKW is proficient with all types of structures and building materials.

Whether for new construction, renovation, or expansion, TKW turns its experience and expertise into precision engineering design with the firm's trademark quality controls.
